Case management

Overview

1. Create your own forms with user defined fields to capture the request or case information.
2. Allow Employees to raise service request via the online self service portal and the mobile apps.
3. Full case lifecycle end-to-end process management.
4. Full Roles based access control, giving users access to only the functionality they need.
5. Cloud based platform with secure access via 256 Bit SSL encryption.
6. Dashboard reporting to allow a management summarized view on the current workload.
7. Automated workflow & rules, a complete workflow solution to map to the organisations business processes.
8. 24 hour support.
9. Fully Configurable, easy to use, clear and precise.
10. Multi-channel Access
11. Integrated with all back office systems
12. Reporting suite

Introduction

Case management is critical to the work of many organisations but it is often intensely manual, paper-driven and plagued by delay with poor management visibility.

Correspondence and notes need to be linked to each case so that they can be easily found, and key information needs to be accessible to case workers when they are away from the office. It must be easy for case workers to access and share increasing amounts of data whilst following formal data protection procedures.

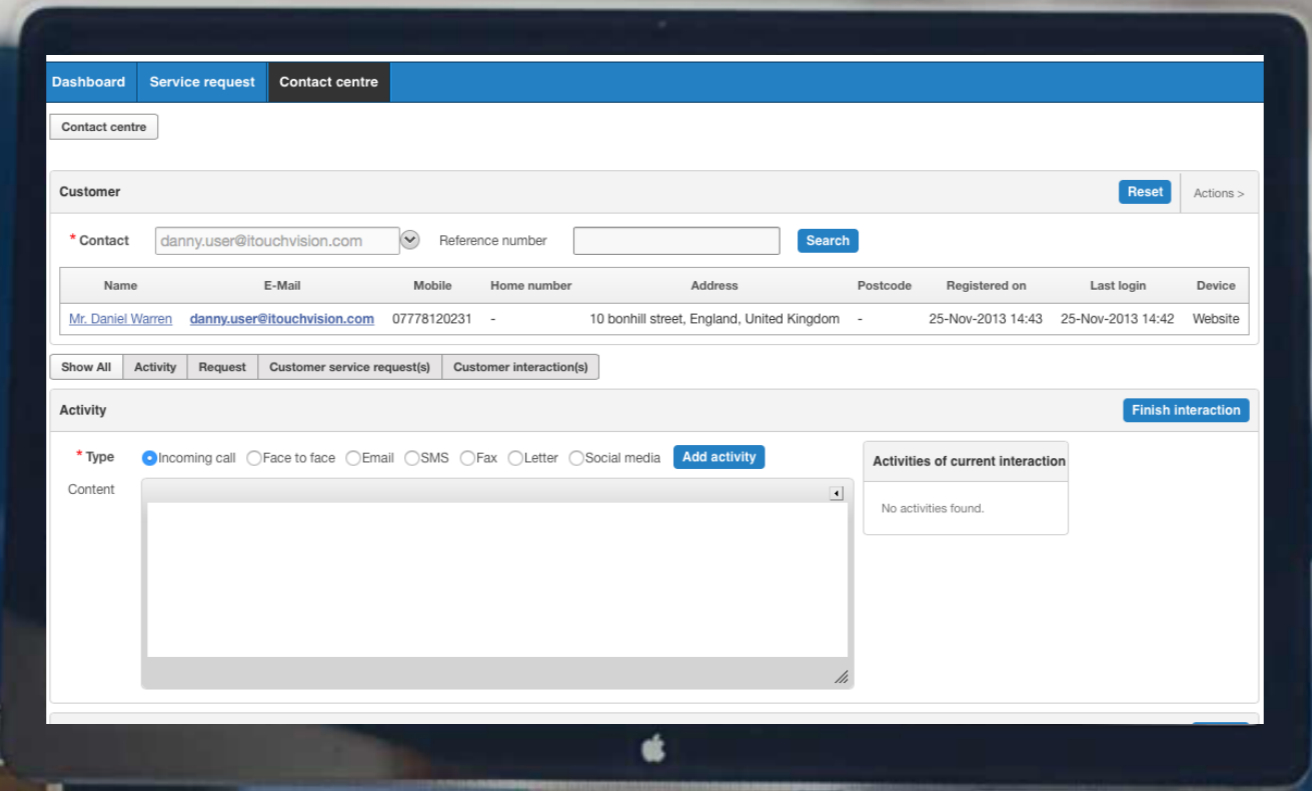

Our case management platform, enables case workers to systematically manage a case from creation to closure. Case information is held on a centralised private cloud so that all relevant correspondence, emails, case notes, assessments and contacts can be linked to a case.

Mobile case workers can access the case information via their iPhone, iPad, android or windows device via our mobile worker apps. The case information can be immediately synchronised to the back office allowing the admin teams to assess information of cases in real time.

Our case management platform can handle a variety of cases, including service requests, incident management, investigations, applications and other regulated transactions.

Key Features

1. A unified view of actions and history for a case and its associated content, including audit trails to ensure compliance.
2. Comprehensive case management and policy management
3. Facilitates complex eligibility determinations and change of circumstance through the eForms.
4. Allows citizens or customers to view their case details online
5. Enables assessment of circumstances, including built-in assessments for risk, safety, and environment with eForms
6. Assigns service providers and referrals
7. Views that are tailored to each user's roles and permission levels; along with collaborative tools including task lists, deadlines, alerts, and threaded discussions that improve case worker productivity.
8. Real-time notification and tracking to support management reporting.
9. Dashboards and reports
10. Improved accountability and data protection: Case workers are guided through defined processes to ensure compliancy with key data protection measures. All emails, correspondence and meetings can be tagged to individual cases to improve accountability. Case information can be accessed securely by mobile workers offsite.
11. Case Management processes are streamlined and predictable as the repeatable elements of case handling are encapsulated in standard processes. This leads to measurable improvements in case completion times with reduced case effort and costs; as well as better response times.
12. Our Dynamic Rules platform drives work to the right people at the right time whilst automation of repetitive tasks saves time and speeds up case processing.
13. Case workers have a better view of the overall progress of a case. They can easily share information or initiate discussions on particular stages as well as allowing inter-agency collaboration and hand-off in complex cases.

Benefits

1. All case related information at your fingertips

All documents are stored in the central database; that's emails, letters, acknowledgements, meeting agendas, forms, or any other kind of document. View all the documents related to a case based on a certain standard; all the documents associated with a particular contact; or all the documents owned by one person or typed by another.

2. Email integration.

This means that you can save emails and attachments to an appropriate case file at the touch of a button, helping you to stay on top of your inbox and ensuring that the case information is also complete. The majority of work for most teams comes in via email, so it's very important to keep track of these.

3. Reduce time spent on document creation and management

With the use of customised form templates and workflows, cases are created, stored and managed in real-time. You can also associate different parties to the case and link contact details.

4. Automation to free staff from background tasks

Three different levels of workflow provide the opportunity for work to be heavily controlled or largely free-flowing. A number of standard workflows already exist. Our customers typically gain between 40 and 80%

5. Process improvement

Our case management platform will help your organisation improve internal processes and procedures and will free up employee time and will allow them to focus business as usual tasks.

6. Keep on top of key dates and events

With each task having a due date, completed and scheduled date you will be able to know exactly when a task is meant to happen and when it actually happened.

7. Integration to 3rd party systems

Case Management software can be fully integrated with other systems, supporting diary and case management.

8. Enhance teamwork and enable flexible working practices

Team members have secure access to all case information, making it easy to find and access the very latest information regarding a case. As this is a cloud platform we provide the ability to support secure remote working and flexible working practices.

9. Management information to control risk

Automated and user-defined reporting. In addition to a set of standard reports which allow user-configurable reporting to suit your different organisational needs. Reports can be defined and scheduled to run at set intervals, delivered in a format ready for publication, or exported to Microsoft Excel for further manipulation.

10. Case management facilitates quick and easy updates.

This is particularly useful when someone leaves the department, as now you can easily run a report to see the status of work in progress, forthcoming key dates and areas of risk.

11. Automated time recording

This helps to inform management in demonstrating best value and supporting the case for budget allocation. Automated time recording is designed for professionals who need to track time in order to monitor workloads and auditing for legal matters.

12. Organisation-wide shared contact database

This will aid collaboration and ensure that team members have access to the very latest information. Contact details can be automatically inserted appropriately into forms and precedents. It is also easy to determine all the cases associated with a particular contact at any one time to assess whether there are any conflicts or areas of risk.

13. Governance with role base access control.

RBAC controls security and access which is enabled by our intuitive and user-friendly user interface.

The screenshot displays a web-based case management interface. At the top, there are navigation tabs for 'Overview', 'Dashboard', and 'Case management'. The main content area is titled 'Case details' and shows the following information:

- Category:** Case form - Unpaid leave
- Status:** Open
- Person:** Case User
- Case date:** 03-FEB-2015
- Submit time:** 16-FEB-2015 07:31
- Priority:** Low
- Summary:** Test user

Below this information, there are several expandable sections:

- Information:** A table with columns for Question and Answer. It currently shows 'No data found.' and has an 'Edit information' button.
- Primary contact:** A section with a 'Person details' button and a 'Change primary contact' button. It contains a table with columns: Contact detail, Other information, and Address detail.

Contact detail	Other information	Address detail
Name: Case User Email: case.user@itv.com Mobile: 9987661527 Home phone: -	Registration date: 16-Feb-2015 07:30 Last login: - Device: Website Total case: 1	Address: - City: - Post code: - Region: England
- Linked cases / service requests:** A table with columns: Edit, Case / service request #, Category, Status, Relationship, Description, Enabled, Added by, Date added.

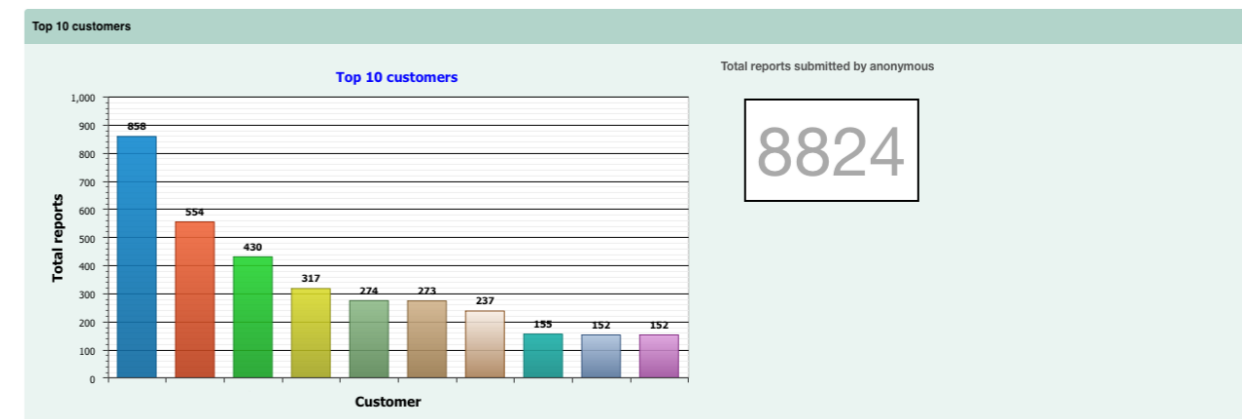

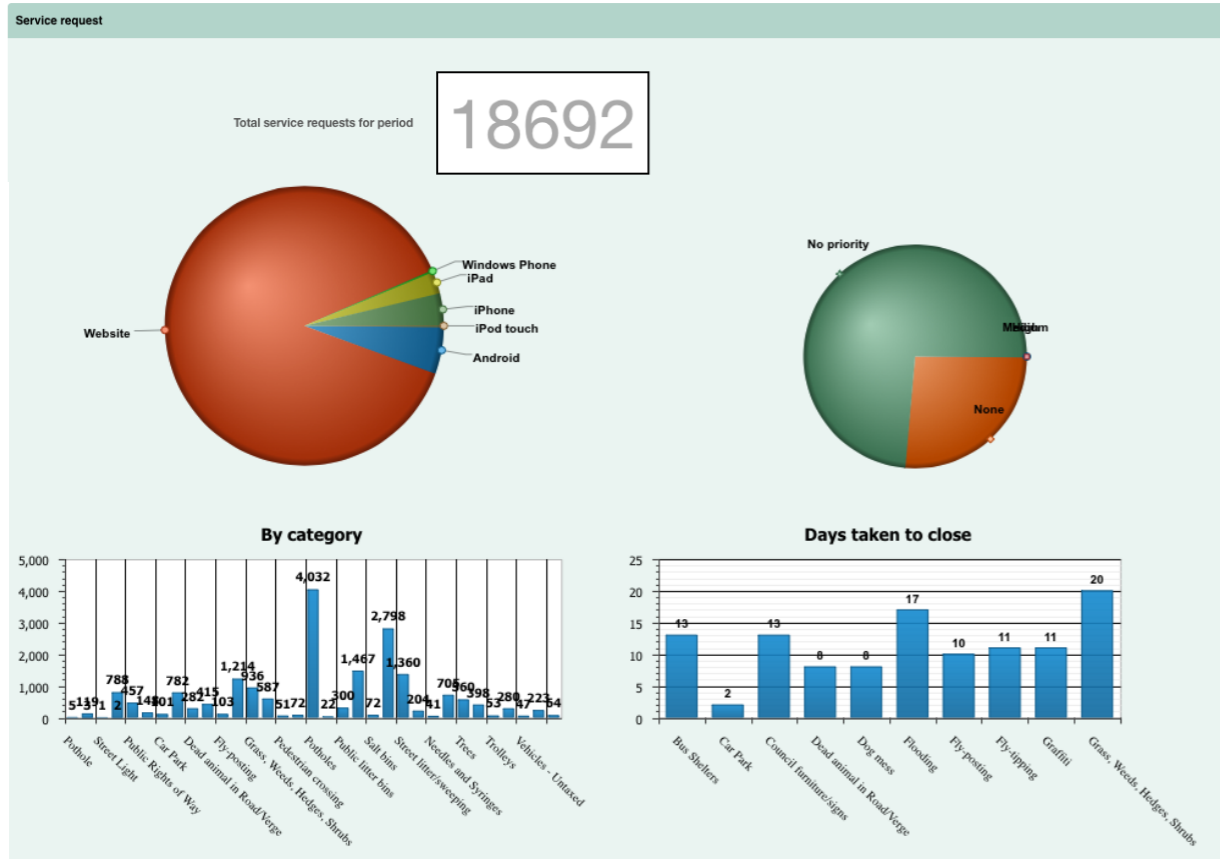

Edit	Case / service request #	Category	Status	Relationship	Description	Enabled	Added by	Date added
	91695	Unpaid leave	Open	Parent	-	Yes	sohil.bhavsar@touchvision.com	3 weeks ago
	91385	Unpaid leave	Open	Parent	-	Yes	sohil.bhavsar@touchvision.com	3 weeks ago
	91387	Gross misconduct	Closed	Parent	-	Yes	sohil.bhavsar@touchvision.com	3 weeks ago
- Documents:** No documents found.
- Contacts:** A table with columns: Edit, Type, Contact, Role, Comments, Added by, Date added.

Edit	Type	Contact	Role	Comments	Added by	Date added
-	Contact person	Case User (case.user@itv.com)	Contact person	-	sohil.bhavsar@touchvision.com	3 weeks ago
- Tasks:** No task(s) found.
- Notes:** No note submitted.
- Links:** No links found.
- Outcomes:** No outcomes found.
- History:** A chronological log of events.

Date	Count	Event	User	Date & Time
March	3	Current case linked with case # 91695	sohil.bhavsar@touchvision.com	03-mar-2015 08:18:36
March	3	Current case linked with case # 91695	sohil.bhavsar@touchvision.com	03-mar-2015 08:17:42
February	16	Current case linked with case # 91695	sohil.bhavsar@touchvision.com	16-feb-2015 07:43:27
February	16	Initial status.	system	16-feb-2015 07:31:26
February	16	Service request has been submitted.	sohil.bhavsar@touchvision.com	16-feb-2015 07:31:26

On the right side of the interface, there are buttons for 'Update status', 'Send email', 'Send SMS', 'Edit information', 'Change primary contact', 'Primary contact detail', and 'Relationship'. There is also a 'Related cases' section with a link to '91694 - Sickness (Mark Eves)'.

About Us

iTouch Vision is a Mobile and Cloud company looking to take advantage of the next generation of computing. We think differently, we act quickly, we aim high and we achieve our goals.

Summary

Case management for HR provides a multi-channel help desk for employees. Night or day employees can use the web portal, the mobile app or the contact centre to search the knowledge base, create service requests and manage their cases.

With fully configurable forms, workflows, statuses, priorities and service requests you can make the Case management for HR work the way your business works.
